

ABSTRACT

Hubungan Penguasaan *Goi* dengan Kemampuan *Dokkai* Siswa Kelas XII IPA SMA Negeri 2 Pariaman Tahun Ajaran 2016/2017

By: Novia Afrida Wati

The background on this research is underlined to the students's ability in student's score. The underline of this research based the low of student's score in examination. This is can be seen 80% of the students cannot pass the standard competence. Furthemore, the low of the students's ability in mastering goi and dokkai is one of the problems of this research.

This research is aim to see the relation between goi mastery and dokkai skill of the XII students at SMA Negeri 2 Pariaman. This is quantitative research with using descriptive methode by using relation design. The population of this research was the students in SMA Negeri 2 Pariaman. The sampels were 32 students in XII IPA 1 SMA Negeri 2 Pariaman. The data of this researchs are done by test score in the student's ability in mastering goi and dokkai.

Based of the results of this research conducted in mind the following points. First, the average value of students' mastery goi class XII IPA 1 SMA 2 Pariaman is 77.32 with qualifying not completely. Secondly, the average value of the class XII students the ability dokkai IPA 1 SMA 2 Pariaman is 79.73 with qualifying not completely. Third, there is a significant correlation between mastery goi with the ability dokkai class XII student IPA 1 SMA 2 Pariaman on the significant level of 95% with degrees of freedom $n-2$ ($32-2 = 30$). Thus, H_0 and H_1 accepted because the test results prove that because the test results prove that t_{count} greater than t_{table} , $12.01 > 1.70$.
