The problem in this study is that physical education teachers of sports and health in junior high schools in Padang Pariaman Regency still experience many obstacles in carrying out their duties as educators, this shows that teachers of physical and sports education have not shown the maximum quality of competence in teaching. So that things affect the performance of physical education and health teachers in producing competitive students. The purpose of this study was to determine the competency achievement of sports and health physical education teachers in the Public Middle School in Padang Pariaman Regency.

This research is a descriptive quantitative research with survey method, the instrument is a questionnaire. Data analysis used descriptive quantitative percentage statistical methods. In this study the physical education and sports teachers were objects, while the subjects were 52 junior high school principals in Padang Pariaman District.

The results showed that the achievement of the competency of physical education teachers in sports and health (pjok) in junior high schools in Padang Pariaman Regency was obtained by the achievement rate of respondents of 65.31% with good categories. The achievement of PJOK teacher competency based on each indicator is that Pedagogic Competence can get an average value of 65.18% with a good category, in the Personality competency indicator, the average score is 65.02% with good categories, in the Social competency indicator the score is average of 65.50% with a good category, on the indicator of professional competence can be obtained an average value of 65.56% in the good category. Then it can be concluded that the competency achievement of sports and health physical education teachers (PJOK) in State Middle Schools in Kabupaten Pariaman is in the Good category.
